

PARKING LOCK is designed to provide parking for the general public, as well as for drivers with special privileges and needs. These include spaces reserved for monthly, annual renters, owners, renters of condominium, co-op parking spaces, disabled drivers and company executives and visitors. In dedicated parking garages, access to the entire garage or to a designated area within it can be restricted using a single access controlled barrier. In a mixed-use application, however, access needs to be controlled on an individual parking space basis.

Remote control parking lock has been installed in the following types of applications,
Office buildings, Residence Condominiums, Hospitals, Airports, Shopping centers, Stores, Handicapped Parking

Individual User

This is the simplest configuration; one user is authorized to use a single parking space. An example is a residential condominium where a specific parking space is assigned to a building resident. The solution is to provide a **PARKING LOCK** to him. Up to 12 remote controls can be programmed per parking lock for the resident's family and guests.

Corporate Parking

In this scenario, a company has a number of spaces reserved for its important employees and/or visitors. Therefore, it needs to reserve some spaces for these people.

Retail Parking

In this usage, a number of parking spaces in front of strip-mall/mall stores are remotely controlled from inside the store. The spaces are protected by remote control parking locks, and when a customer approaches, a store employee activates the appropriate parking lock with remote control

Beat your parking offender

AS-BW Parking Lock
Reserve parking space for you

AS-WL Wheel Lock
Immobilize or protect the car for you

Professional factory
Professional product
Professional service

AS-BW-1
 Dimension (L*W*H) :
 650*195*300mm
 Weight: 13kg
 Small but smarter
 Open the cover cap to make the
 maintenance freely
 Remote control, Easy Operation
 (anyone can master it in 3 minutes)
 Remote Control distance: ≈30m,
 Maximum 12 remote controls can be
 supplied, 2 pics for free.
 Power Supply: Storage battery (12V
 7AH) or electricity (Input Voltage: DC
 12V)
 Installation requires only 4 special
 bolts, as simple as it can be.
 Low Noises, Stable Capability, default
 rate below 1%.
 When the battery power is below 10V,
 the parking lock goes down
 automatically.

AS-BW-3 Weight: 15kg
 Dimension (L*W*H) : 720*200*100mm

AS-BW-4 Weight: 15kg
 Dimension (L*W*H) : 720*200*80mm

Bigger and stronger
 Remote control, Easy Operation (anyone can master it in
 3minutes)
 Remote Control distance: ≈30m, Maximum 12 remote
 controls can be supplied, 2 pics for free.
 Power Supply: Storage battery (12V 7AH) or electricity
 (Input Voltage: DC 12V)
 Installation requires only 4 special bolts, as simple as it
 can be.
 Low Noises, Stable Capability, default rate below 1%.
 When the battery power is below 10V, the parking lock
 goes down automatically.

Wheel Clamp AS-WL-1
 This type of wheel lock can be changed according to
 customer's request, (size, color, thickness of steel plate,
 with or without spike, with or without cover cap, etc. We
 can produce it in the way what you like it to be.)
 How does wheel lock work on illegal parking?
 When illegal parking happens, the traffic police, or
 parking manager, or the parking space owner can
 immobilize the car
 with wheel lock, then the rule-breaker will learn a good
 lesson.
 How does wheel lock work on car security?
 The wheel lock protects car in an original way, it locks
 the tire
 of the car. Any thief would easily give up when he finds
 a big-yellow
 lock on the car's tire. The wheel lock works before the
 thief breaks the window and the screaming of alarm.

AS-BW-5
 Dimension (L*W*H) : 520*475*90mm
 Weight: 12 KG

Locking height reaches 460mm.
 With spring in the arms, it can protect itself and car
 when the Collision happens.

AS-BW-O (spring) Manual Type
 Dimension (L*W*H) : 700*500*430mm
 Weight: 8.8 KG
