PARKING LOCK

is designed to provide parking for the general public, as well as for drivers with special privileges and needs. These include spaces reserved for monthly, annual renters, owners, renters of condominium, co-op parking spaces, disabled drivers and company executives and visitors.

Parking lot's a limited resource, there where illegal parking happens often, where a ready market's for our parking lock.
The CUSTOMERS for parking lock are those who want to stop others from using their private parking spaces, who want to reserve some parking spaces for their VIP clients, monthly parking customers...
If you have your way to reach those people, parking lock's going to be a great business for you.
Parking lock is usually installed in the following types of applications,

- Office buildings
- Residence Condominiums
- Hospitals, Airports
- Shopping centers
- Stores
- Handicapped Parking...

Application Situation of parking lock

Individual User

This is the simplest configuration; one user is authorized to use a single parking space. An

example is a residential condominium where a specific parking space is assigned to a

building resident. The solution is to provide a PARKING LOCK to him. Up to 12 remote

controls can be programmed per parking lock for the resident's family and guests.

Corporate Parking

A company has a number of spaces reserved for its important employees and/or visitors.

Therefore, it needs to reserve some spaces for these people.

Retail Parking

In this usage, a number of parking spaces in front of strip-mall/mall stores are remotely

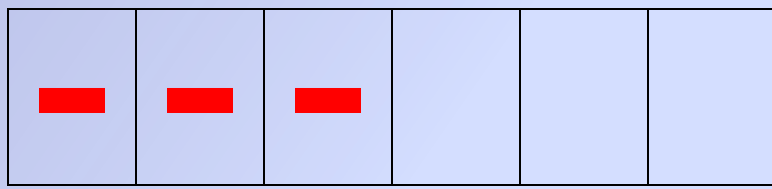

controlled from inside the store. The spaces are protected by remote control parking locks,

and when a customer approaches, a store employee activates the appropriate parking lock

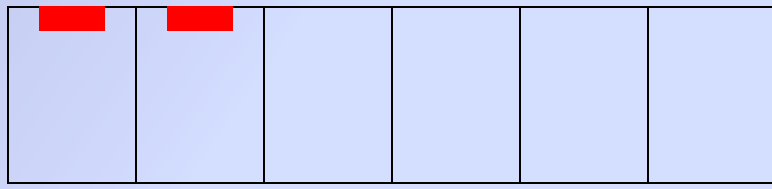

with remote control.

How does it protect a private parking space

The remote control parking locks can protect private parking space from unauthorized taking effectively and politely. When a car arrives near the spot, press the descending button of the remote control, the parking lock drops down, then the car can enter the spot. After the car got out, press the ascending button of the remote control, the parking lock gets up. Than no car can park at the spot. So the parking lock works to reserve the space for the owner.

correct

wrong

Consider: If parking lock is installed in the front of spot it is easily damaged from by driving cars. Install to middle especially when line is small.

SAME LOOK, DIFFERENT QUALITY

In china it is unavoidable copying products. What we do against it is improving our products permanently.

1. Ours are simple at operation, but not simple produced. The metal parts of parking locks need a lot of high-level welding work, which we consider the key of quality. Before assembling we check the parts carefully in our factory

2. Our painting requires a real high-quality craftsman ship. The photos cannot show it . In real the colors are bright and glossy. Cleaning will not make them fading.

3. The function parts, like motor, battery, control panel, we have experience of more than 50,000 pcs selling for several years.

We cooperate with big professional factories who design such parts for our parking locks especially and have improved on our experiences from many years of use.

It looks easy to fake such a product, but you will not be able to guarantee the quality which we can offer.

Starting the sales in 2004 we have sold more than 300,000 pcs parking locks (remote control and manual) from our factory have been installed in China and oversea countries.

This experience and feedback from market enabled us to supply with a high qualified product and professional service instructions.

The **PARKING LOCK** is designed to provide parking for the general public, as well as for drivers with special privileges and needs. These include spaces reserved for monthly, annual renters, owners, renters of condominium, co-op parking spaces, disabled drivers and company executives and visitors.

In dedicated parking garages, access to the entire garage or to a designated area within it can be restricted using a single access controlled barrier.

In a mixed-use application, however, access needs to be controlled on an individual parking space basis.

Remote control parking lock has been installed in the following types of applications:

- **Office buildings**
- **Residence Condominiums**
- **Hospitals**
- **Airports**
- **Shopping centers**
- **Stores**
- **Handicapped Parking**

Individual User

This is the simplest configuration; one user is authorized to use a single parking space. An example is a residential condominium where a specific parking space is assigned to a building resident. The solution is to provide a PARKING LOCK to him. Up to 12 remote controls can be programmed per parking lock for the resident's family and guests.

Corporate Parking

In this scenario, a company has a number of spaces reserved for its important employees and/or visitors. Therefore, it needs to reserve some spaces for these people.

Retail Parking

In this usage, a number of parking spaces in front of strip-mall/mall stores are remotely controlled from inside the store. The spaces are protected by remote control parking locks, and when a customer approaches, a store employee activates the appropriate parking lock with remote control.

Features of Remote Control Parking Locks.

- Special size

In China, parking locks are all around 30cm to 35cm high, while in Mid-east, EU, most customers want it to be much bigger and higher.

So we updated our motor, to make our AS-BW-5 reach a height of 53cm

That is unique in China.

- Qualified packing

We use carton made of highest-level material, almost strong as a wooden case.

That is very important as had some trouble with damage on shipping cause by normal carton.

- Remote Control

The distance is 30m.

Up to max 40 remote controls can be supplied for one parking lock.

2 pcs are free. We use the newest control panel for remote control parking locks in china which is only available through us.

User need not to get out of car to lock or unlock the parking lock. He can just do it from the comfort of the driver's seat.

- Power Supply:

Storage battery (12V 7AH). Consider 4 times per day and one full charge can last at least THREE months.

Our recharge battery takes around 8-10 hours to fill. This is as simple as charging the mobile phone's battery.

When the battery is below 10.5 V it will automatically make 20 seconds buzz as warning signal every time the user gets it up or drops it down to remind him on recharging.

It will not block, but go down when empty, but let you know before will do.

- The electronics is safe (Input Voltage: DC 12V).

The parking Lock is a Low Voltage Device.

- Installation needs only be done with 4 special expandable bolts.

We believe that parking is a valuable and limited resource. With the rapid growing of the amount of cars, it will become more and more.

More people begin to look for a device to reserve their private parking space and protect their private parking lot from unauthorized taking, and the consequence is, they will ask us for parking locks.

AS-BW REMOTE CONTROL PARKING LOCK SERIES

Key parts with CE (control panel, motor, storage battery)

With remote control car parking lock, you will never again have to worry about someone else taking your personal or business car parking space.

❖ It is protected.

❖ It is locked.

❖ It is your private spot.

You can take control of your car parking space with the comfort of sitting in your own driver's seat!

No padlocks! No getting in and out of your car in the rain!

With your remote control car parking lock you will ALWAYS know that your parking space is vacant and waiting for you.

Technical Data of REMOTE CONTROL PARKING LOCK

Remote control provides Easy Operation

Remote Control distance:

≥30m, two remote control supplied.

Stylish Show, scientific structure.

Power Supply:

Storage battery (12V 7AH) or electricity (Input Voltage: DC 12V)

Charger included.

Over Loading and Over Pressing Protection

How does it protect a private space

The AS-BW series remote control parking locks can protect private parking space from unauthorized taken effectively and politely. When a car arrives near the spot, press the descending button of the remote controller, the parking lock drops down, then the car can enter the spot. After the car got out, press the ascending button of the remote controller, the parking lock gets up, in this way; it reserves the private parking space for the owner.

SPECIFICATIONS: AS-BW-1

(Patent No: ZL 2005 30057685.5)

Locking height:

300mm, unlocked

78mm locked

Dimension :

720*182*80mm

N.W.: 14.5 Kg; yellow carton

Packing Size

(2 sets):

750×250×240mm

G.W.: 30 Kg

AS-BW-3

Locking height:

330mm locked:
100mm unlocked

Dimension :

720*200*100mm

N.W.: 14.5 Kg; yellow carton

Packing Size (2 sets):

750×250×240mm

G.W.: 30 Kg

(Patent No: ZL 2005 2 0057867.7)

AS-BW-4

(Patent No: ZL 200830047721.3)

Locking height:

300mm locked; 100mm unlocked;

Dimension :

700*200*80mm

N.W.: 14.5 Kg;

yellow carton

Packing Size (2 sets): 750×250×240mm

G.W.: 30 Kg

AS-BW-5

(Patent No: ZL 200830047720.9)

Locking height:

470mm locked, 90mm unlocked;

Dimension : 520*475*90mm

N.W.: 12 Kg; yellow carton

Packing Size (1 set): 540×500×120mm G.W.: 13 Kg

Special feature: it can bend backward or forward to some extent, with the spring in its arms, in this way; it can protect itself from outside force's hit.

**The New Model AS-BW-5 (according to clients' request)
(Patent No: ZL 200830047720.9)**

Locking height:

500mm locked; 90mm unlocked;

Dimension : 520*475*90mm

N.W.: 13 Kg; yellow carton

Packing Size (1 set): 540×500×120mm G.W.: 14 Kg

Note: When this item is up, the max height is 500mm, and the dimension of the top piece of flat is 465*160mm, with reflective material on the top, very attractive in the darkness.

Note:

All the remote control parking locks' controllers share the same outlook.

Every parking lock equipped with two remote controllers, the two are pre-set in the factory to an unique digital access code that matches only one parking lock.

Press the up button will lift the parking lock, and press the down button will restore the parking lock to horizontal.

We can support in shipping DDU.

Ask us our conditions from China to your place and compare!

If you order more even in mixed quantities, we can negotiate discount depending on complete order quantity.

Delivery times depend on quantity:
usually 10 to 15 working days (FOB Shenzhen).

Storage battery

Operate

1. The connector of the battery
2. Connect the battery
3. Lock the door of the battery space
4. On the other side of the parking lock, how the wrench drops down the parking lock when the battery or remote control is out of work.

Charger

We can provide with any kind of charger plugs

Expanding Bolts for secure installation.

Our policy for Distributors

We don't deal with end-users; we would not compete with our distributors.

Once we have a distributor at local market, we will transfer all enquires there to our distributor. To help him market our products, we would put our distributors' name and contact info on our website to guide our customers to the right distributor. And we would fully support our distributors' service after sales to secure customer's satisfaction.
